Scale-up Skills

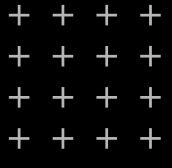
INTRODUCTION

Scalant is an open-source tech community of a wide range of learners, intellectuals, and enthusiasts where they can collaborate, learn, and flourish together. We aim to provide an inclusive and productive environment for individuals to improve their skill set by directing and supporting those in need.

We organise events and hackathons, open projects for contributions, share free tools and resources, provide mentorship, and assist newcomers in taking advantage of various opportunities. In short, we support learners in their uncertain journey towards their goals and assist them in putting their knowledge into action by providing the right guidance and resources.



OUR STORY

When we first started our career in tech, we were intrigued by technology and wanted to explore beyond the curriculum. However, it was frequently challenging for us to comprehend where to start when learning a new subject or what skills we needed to pick up to progress further.

We realised that this seemingly unimportant aspect was taking up a lot of our time and keeping us from taking advantage of various possibilities. Students do not get the ideal atmosphere to thrive, and it takes a long time to discover a suitable opportunity to upskill.

This is how we devised the notion of a community in which we can utilise our knowledge, experience, and network to assist learners who are wasting a significant amount of their time looking for reliable resources on their journey.

We envisioned creating a community that encourages teamwork, knowledge sharing, and contribution where passionate individuals can network with people from various backgrounds who share their interests. This would also allow individuals to expand their networks, form teams, engage with others, and seize numerous opportunities.

SCALING YOUR KNOWLEDGE EFFECTIVELY

Scalant focuses on helping learners grow both personally and professionally by scaling their knowledge, confidence, and creativity. When we refer to "learners," we mean anyone who is interested in technology, whether they are youngsters or working professionals. Scaling your expertise, however, is dependent on how well the foundation is built. Therefore, we encourage and guide our community members to lay the foundation and become proficient in it before upgrading their skill set further.

Along with that, we also place an emphasis on the practical implementation of knowledge. This would enable them to acquire real, hands-on experience and a better understanding of what they are learning.

HOW DO WE DO THIS?

We are aware of the requirements of newcomers; they need resources to learn from, tutorials for some direction, and practical implementation for experience. Once they become proficient in their chosen field, they continue to seek out opportunities to learn new things and develop their existing knowledge further. At Scalant, we address each of these obstacles and help learners get past them.

We select the appropriate set of resources for them to use; host events to keep them informed and give them a sense of direction; plan hackathons to assist them in putting their knowledge into practice; and offer mentorship as support. We also welcome and encourage members of our community to collaborate on projects or contribute to open source.

Additionally, we continue to collaborate with other communities and startups to broaden our services and offer our support in the most efficient way possible.

Scale-up Skills

OUR VISION

Our aim is to build a platform for learners to share a cooperative and productive space where everyone can develop together and keep up with the rapidly evolving tech industry, thereby empowering them to enhance the technical community as a whole.

Scale-up Skills

WHY SCALANT?

- Integrated resources for various domains
- Exclusive Events and Hackathons
- Interaction with our featured mentors
- Support and guidance from the community
- Connect with peers from various colleges globally
- A welcoming space to share your ideas and strategies
- Discuss, collaborate, and work with others
- Updates and guidance on all major events
- Resume review and feedback on projects
- Exposure to internships and opportunities
- Rewards and swags to best performers and contributors

Scale-up Skills

DOMAINS COVERED

- Web Development
- Git and Github
- Web3
- Programming
- DSA
- Open Source
- Blockchain
- Data Science
- Competitive Programming
- Artificial Intelligence/Machine Learning
- Graphic Designing
- 3D design
- UI/UX
- App Development
- Cloud computing
- Cybersecurity and Ethical Hacking
- Game development

Scale-up Skills

We are also accessible on social media platforms.
